FIN:

Chief Complaint: left wrist pain; LEFT WRIST INJURY

Visit Date: 7/25/2012 6:04 PM

Address: [REDACTED]

Phone: [REDACTED]

Primary Care Provider:

Name:

Phone:

[REDACTED] would like to thank you for allowing us to assist you with your healthcare needs. The examination and treatment you received in the Emergency Department has been given on an emergency basis only. (Should your condition worsen or any new symptoms develop, or should you not recover as expected, contact your doctor or the doctor you were given for follow-up care.) If you cannot contact the doctor, return to the Hospital Emergency Department.

Follow-up Instructions

[REDACTED] has been given the following patient education materials and follow-up instructions:

Wrist Pain (Sprain-Strain)

Wrist injuries are frequent in adults and children. A **sprain** is an injury to the ligaments that hold your bones together. A **strain** is an injury to muscle or muscle cord like structures (*tendons*) from stretching or pulling. Generally; when wrists are moderately tender to touch following a fall or injury, a break in the bone (*fracture*) may often be present.

HOME CARE INSTRUCTIONS

Apply ice to the injury for _____ minutes each hour while awake for the first 2 days.

Put the ice in a plastic bag and place a towel between the bag of ice and your skin.

Keep your arm raised above the level of your heart whenever possible to reduce swelling and pain.

Avoid using your injured extremity as long as pain is still present.

If a splint or ace bandage has been applied, use it for _____ or until seen by a caregiver for a follow-up examination.

Only take over-the-counter or prescription medicines for pain, discomfort, or fever as directed by your caregiver.

SEEK MEDICAL CARE IF:

You have increased pain or swelling.

Name: [REDACTED]
MRN: [REDACTED]

Your fingers are colder than those on your other hand.

SEEK IMMEDIATE MEDICAL CARE IF:

Your fingers are swollen very red, white, and cold or blue.

Your fingers are numb or tingling.

You have increasing pain or difficulty moving your fingers.

Remember the importance of follow-up and possible follow-up x-rays. Improvement in pain level is not a guarantee that you did not fracture a bone in your wrist. The only way to determine whether or not you have broken a bone is by x-ray.

MAKE SURE YOU:

Understand these instructions.

Will watch your condition.

Will get help right away if you are not doing well or get worse.

Document Released: 09/27/2006 Document Re-Released: 11/30/2009

Wrist Splint

© GEF & ASSOCIATES INC., 1999

A wrist splint is a brace that holds your wrist in a straight position. They are used to help hold the wrist still. This may be needed for healing broken bones or for sprained wrists. It can also help relieve pressure on the nerves.

Splints are available in drugstores. Custom made splints may be needed to help special problems.

HOME CARE

Wear the splint as directed. It may be worn during sleep.

Ask your doctor if it is okay to wear a splint while working.

A wrist splint is usually helpful short-term treatments. Long term use may be needed.

Following splint use, slowly exercise your hand and wrist. This helps build muscle strength.

When not working, use ice on your wrist for 20 minutes. Do this every couple of hours while awake. Put the ice in a plastic bag and place a towel between the bag of ice and your skin.

Name: [REDACTED]
MRN: [REDACTED]

Keep your arm raised above the level of your heart whenever possible.
Only take medicine as directed by your doctor.

GET HELP IF:

You have more pain that does not go away with medicine.
You have swelling in your wrist that is getting worse.
You are losing feeling in your hand.
You have increasing pain or can not move your fingers.
Your skin or nails turn blue or grey or feel cold or numb.
There is a bad smell, or new stains and/or pus-like drainage coming from under the cast.
